

iSeries security and compliance software - what's most important for you?

- ✓ Maximum **protection**?
- ✓ Amazingly **simple operation**?
- ✓ Powerful **auditing** and **reporting**?
- ✓ Penetrating **assessment** capabilities?
- ✓ Control of **policy** through templates?

Fortunately, there is a product comprising all of these, giving you the **highest ROI** in its class:

Maximum security, simply!

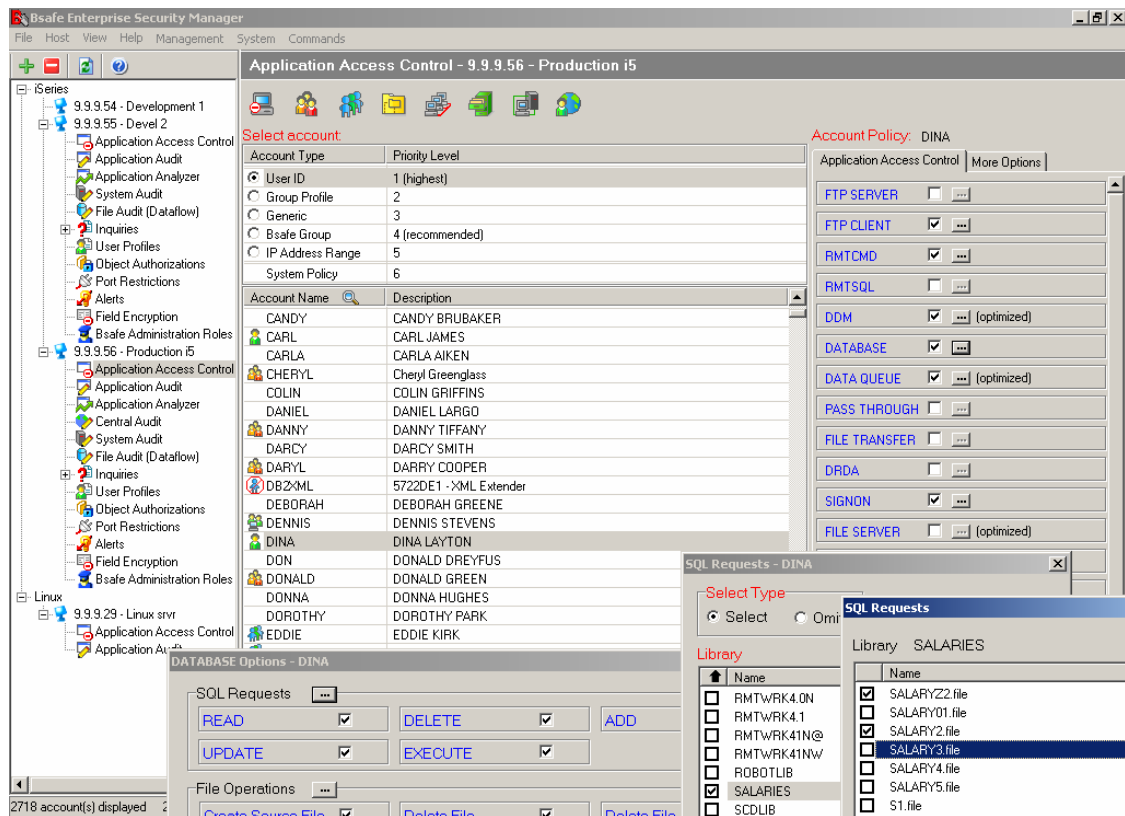

Simplicity ♦ Ease of Use ♦ Protection
System management ♦ Policy Control ♦ Auditing
Alerting ♦ Access Control ♦ Compliancy ♦ Reporting

Someone could be manipulating information on your i5 or iSeries and you may never know about it. Even using a hardware firewall, your computer is still open to penetration from outside and misuse from within by people with more system authority than they need. Your data can be viewed, changed and even deleted - without trace.

Bsafe/Enterprise Security is a comprehensive security solution for the iSeries to prevent misuse of your system. It is an unparalleled combination of exit-point access control, monitoring, auditing, reporting, IDS alerting and general security management in a single product, all tightly controlled through an easy-to-use GUI.

Bsafe/Enterprise Security gives you the ultimate answer to key issues faced by corporate executives and computer security personnel in today's age of **compliance**.

Bsafe/Enterprise Security uses client/server architecture. The essential protection and reporting software resides internally within the iSeries giving native protection while definitions and control are handled through a friendly and intuitive GUI interface on one or more PC's on the network.

Bsafe Enterprise Security

Included Modules

1.  **Windows-based GUI** management console with on-line help.
2.  **Application Access Control** for iSeries and Linux including
 - Permissions by group
 - User/IP address control
 - Account swapping.
 - Time control
 - Replication across multiple servers
 - File protection against power users
 - Linux optional sub-module
3.  **Application Audit.** Application Access Control for iSeries and Linux. Exit point supremacy.
4.  **Application Analyzer.** A graphical network traffic analyzer.
5.  **File Audit.** A data integrity monitor showing field-level database changes.
6.  **System Audit.** Control of system journal policy, event viewing and reporting.
7.  **iSeries System Inquiries.** On-line reports of object and user authorities.
8.  **User Profile Manager.** Efficient and effective iSeries user management.
9.  **Object Authorization Manager.** Object authority management made easy.
10.  **iSeries Port Restriction Manager.** Lock down access to iSeries ports.

Benefits

Ease of Use. Bsafe/Enterprise Security is the leader not just in functionality, but also in the clarity and user-friendliness of its PC interface. It is this feature that brings advanced iSeries security and auditing to experienced and inexperienced iSeries administrators alike. It works with iSeries HTTP servers including the latest i5 Apache server.

Compliance with Sarbanes-Oxley, HIPAA, COBIT, Basle II, ISO 17799 and other rigid requirements.

Maximum protection of your iSeries through flexible access control of users both outside and within your organization - including authorized and power users.

Powerful auditing capabilities to identify system and data access events and trends.

Extensive reports and inquiries to comply with tight auditing demands.

Management of an ordered audit policy made easy by the intuitive GUI.

Early warning – the built-in IDS (intrusion detection system) will alert you of unauthorized access attempts, failed login attempts and other activities the moment they occur.

A single, integrated product comprising all the major security functions: exit point access control, IDS, audit, policy definition and other principal administration tasks through an intuitive PC interface.

Multi-Platform allowing you to control access across different machines and platforms in one GUI.

Reduction in server load following the elimination of unwanted activity.

11.  **Alerts.** Intrusion detection system (IDS) for network and system events.
12.  **Field Encryption/Masking** (optional module. Keep sensitive field values safe.)
13.  **Administration Role Manager.** Grant selected tasks to your administrators.
14.  **Central Audit.** A multi-source audit history including read-record field values.
15.  **Session Time-Out.** Control of idle-time allowed by user or group and action to take.

ROI. Reduction of administration and development time spent in preventing of data theft, misuse and investigating suspicious events. All in all, the richest feature access control and security solution for your money.

Before you decide which product to implement, check out these points first:

	Bsafe	?
Is it simple enough to allow operation by administrators not expert in iSeries?	✓	
Does it allow you to implement the product quickly with few definitions?	✓	
Does it allow restrictions by user, IP address, user groups and group profile?	✓	
Can you define permissions by application server, sub-function, library and object?	✓	
Does it include an IDS with alerts to your PC, email, SMS, SNMP and to external systems?	✓	
Can its IDS send alerts following system events like system value hanges or bad password?	✓	
Does it allow you to control any number of iSeries servers worldwide from a single GUI?	✓	
Does it provide full GUI management including system journal, receivers and audit policy?	✓	
Does it ship with dozens of pre-defined audit reports of system and network activity?	✓	
Does it provide on-line view of system journal events from your PC with filtering and drill-down?	✓	
Is there a report generator to create custom-built reports?	✓	
What about graphical traffic analysis tools to pinpoint attacks and unauthorized access?	✓	
Multi-Platform? Can you control access to iSeries boxes and Linux machines from a single GUI?	✓	

What Bsafe Customers Say

"Bsafe's product was particularly outstanding in its features and we found it to be the most user-friendly GUI by far... The support we've received has been incredible".

"This was exactly the software I had been looking for... it had certainly helped us increase the security level on our AS400 system".

"Thanks to Bsafe/Enterprise Security, day-by-day security maintenance will be easier and more accurate".

"One of my biggest fears - hackers getting hold of an existing high security password - has been reduced enormously due to Bsafe's IP address and time range control".

ABOUT LIFE IT

Life IT specialise in business support and consultancy for iSeries and Domino environments:

Business Support	Operational Technical Application
Consultancy	Security High Availability Consolidation Single Sign On Linux on iSeries Mail & Messaging

As an IBM premier business partner, we extend our services with IBM hardware and software licensing, renewals & replacement.

Life IT provides any combination of application, operational and technical support no matter what the customer's legacy environment, no matter how long support is projected for. We tackle complex systems where a combination of requirements would normally mean that more than one party is required.

Our support infrastructure includes cover from 7am to 6pm, 365 days a year, with 24 by 7 support available on request. Working to agreed service levels for response and fix times, we provide a wide range of first or second line support services.
