

○ A Comprehensive Security Assessment Report in just 5 minutes...

The time of the **B**safe Security Assessment has arrived.

Many corporate executives and IT managers believe their data is safe enough and that they have sufficient means of protection for their organization. Some might be right, but others do not see all the possibilities of their data being compromised.

Bsafe Information Systems, producer of Bsafe/Global Security and Bsafe Enterprise Security, has now released its long awaited Security Assessment, a tool which can carry out a real-time penetration attack on your computer from the network or internet and show up many weaknesses in policy and definitions.

The Bsafe Security Assessment gives you:

- Real-time penetration attack on your computer.
- Port activity map
- Security policy summary.
- Password policy summary.
- Audit policy summary.
- Pinpointing of deviations from recommended values.
- Application server protection run-down.
- A breakdown of power-users by special authorities.
- A management report summarizing your vulnerability.

ABOUT LIFE IT

Life IT specialise in business support and consultancy for iSeries and Domino environments:

Business Support

Operational
Technical
Application

Consultancy

Security
High Availability
Consolidation
Single Sign On
Linux on iSeries
Mail & Messaging

As an IBM premier business partner, we extend our services with IBM hardware and software licensing, renewals & replacement.

Life IT provides any combination of application, operational and technical support no matter what the customer's legacy environment, no matter how long support is projected for. We tackle complex systems where a combination of requirements would normally mean that more than one party is required.

Our support infrastructure includes cover from 7am to 6pm, 365 days a year, with 24 by 7 support available on request. Working to agreed service levels for response and fix times, we provide a wide range of first or second line support services.
